Small steps: long view

Glasgow Museums

This is one of a series of case studies created to illustrate digital preservation in practice, sharing honestly the challenges of establishing digital continuity in practical environments. It provides key messages from institutions that are taking digital preservation seriously.

Introduction

Glasgow Museums has spent the past decade planning for the preservation of its collection through the completion of an expanse of environmentally controlled, bespoke stores in the south side of the city. The Glasgow Museums Resource Centre is dedicated to preserving the city's museum collection of around 1.2 million objects and a related archive which includes a significant collection of oral history interviews.

The Museums' focus has very much been on conservation and access to the physical objects, but it has become increasingly aware of the importance which a growing body of digital resources play in interpreting and managing the physical collection – and that the digital collection is of significance in its own right. This collection is diverse in form and function and managed by a range of different departments within the organization.

Where to start?

Much of the literature in digital preservation emphasizes the tools and technical requirements for long term access. However a team of technicians, curators and conservators across the Museums recognized that they could only justify the effort of securing the digital collection if they could also demonstrate the impact and value which it could have in the context of the Museums' wider mission. So, rather than starting with tools, a digital preservation working group was established within Glasgow Museums in 2008 to look at what digital collections were most valued by each department, and to report which ones were at greatest risk. A survey quickly established that four collection areas were deemed to be of greatest value and at greatest risk: digital images, audio visual materials, digital art and oral history recordings.

Family photograph donated by an interviewee during oral history project, 2000 Glasgow Lives.

Of these four, it was noted that the oral history collection presented both the greatest opportunity and was at greatest risk. There was no single member of staff or section to look after this collection which included a proliferation of media types some of which were already obsolete, containing material that was unique, local and directly relevant to the mission of the Museums. The collection was growing and most recording was taking place in digital form, but with no guidelines or standards for cataloguing or format. Even so it was recognized that, properly managed, the oral history collection, could be very rewarding in support of research, interpretation and access. It is not hard to justify why a local museum service should prioritize care of a collection like this.

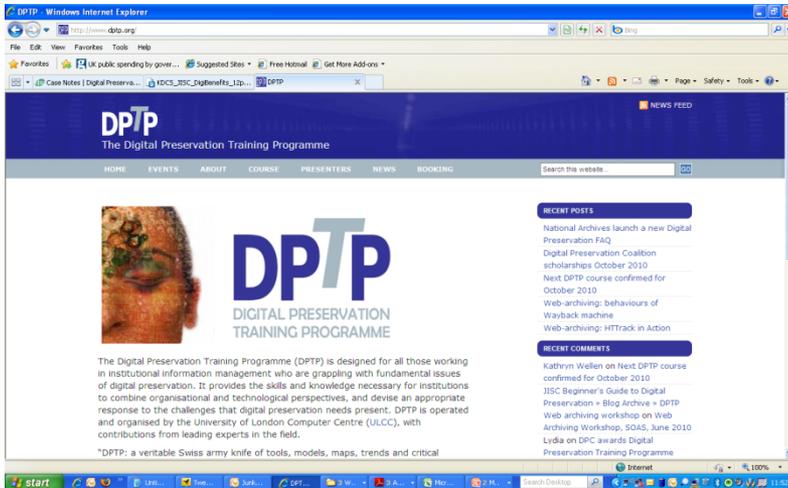

Key Message:

The benefits of digital preservation can be expressed in terms of new opportunities they create in the short and long term. Even relatively simple steps can bring early rewards if properly embedded within the mission of an organization.

Agenda setting and Advocacy

DPC provides the following:

Thematic Task Forces

Public Policy Review

Newsroom

Digital Preservation Award

Direct briefings for policy
makers

Knowledge base on 'state of
the art'

4. Experience in digital preservation shows that normalization and adherence to standards in the creation of digital resources are advantageous to long term access. Therefore we have some **questions pertaining to the practicality of provisions regarding deposit of materials**, in particular those regulations that leave the medium and quality of electronic deposits at the discretion of publishers, and those regulations that pertain to adapting content for preservation. If poorly implemented, these provisions could have the inadvertent result of making preservation intractable or excessively complicated.
5. We recognise that recommendations from the DPC are best focussed on those topics where we can offer specialist commentary. Therefore it is not our intention to provide a detailed scrutiny of each element of these regulations. However it is our view that **preservation is only sensible within the context of access, and that preservation should be configured around the impact that comes with access**. Therefore we have commented on a small number of access issues that we believe have a bearing on the case for preservation.
