

PDF/A-3 for preservation Notes on embedded files and JPEG 2000

Johan van der Knijff

Koninklijke Bibliotheek – National Library of the Netherlands

Part 1: Embedded files

PDF/A-3: embedding of *any* file (type)

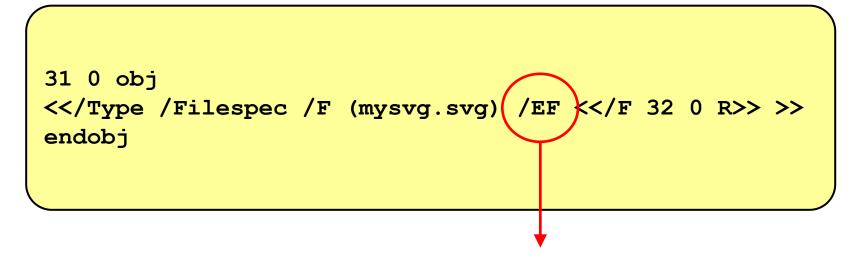

Key point:

Use of "embedded files" really means "embedded file streams" = specific data structure in PDF!

File specification dictionary

```
31 0 obj <//Type /Filespec /F (mysvg.svg) /EF <</F 32 0 R>> >> endobj
```

File specification dictionary

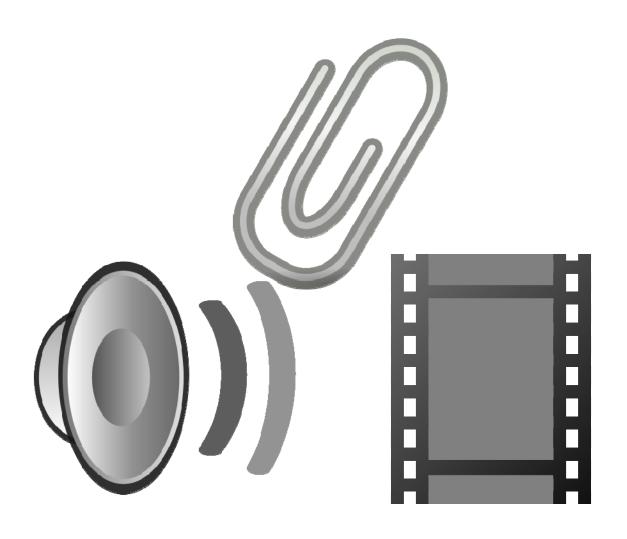

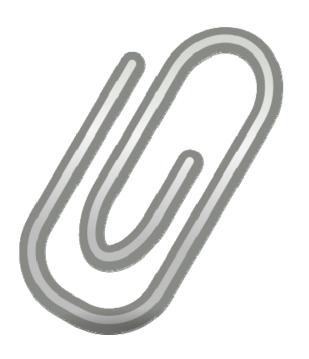

EF key points to embedded file stream

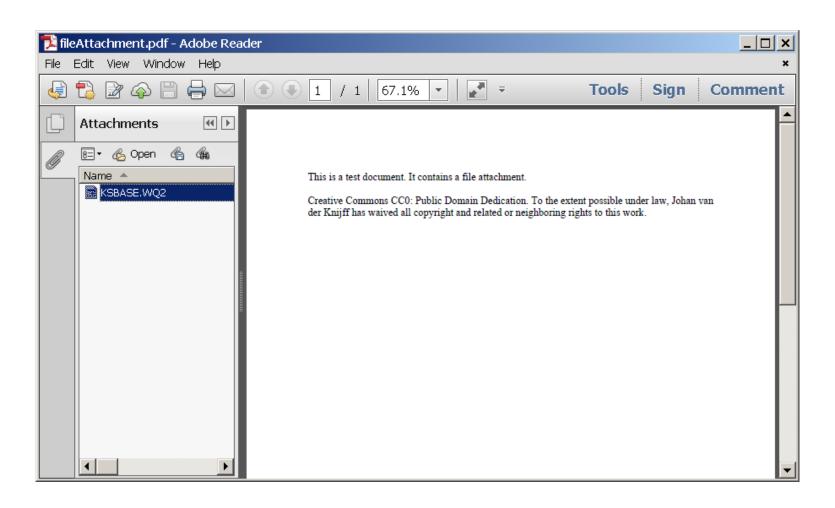

Embedded file stream

```
32 0 obj
<//Type /EmbeddedFile /Subtype /image#2Fsvg+xml /Length 72>>
stream
...SVG Data...
endstream
endobj
```

Uses of embedded file streams

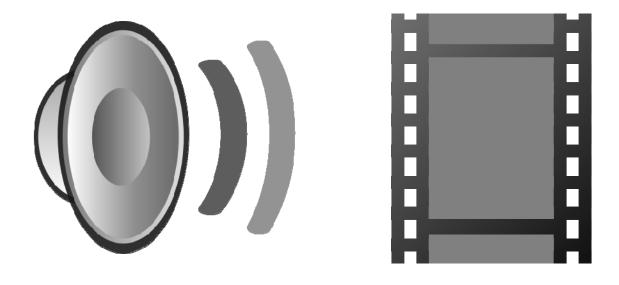

File attachments not meant to be rendered by viewer

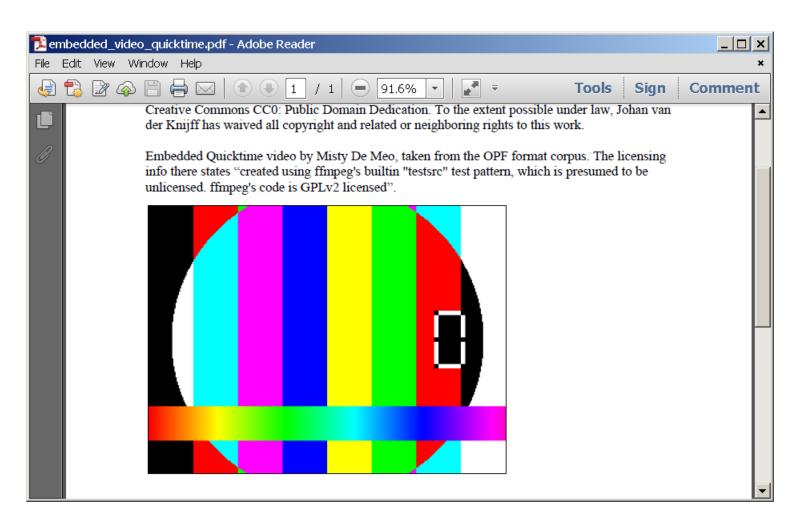

PDF/A-3

File attachment annotation

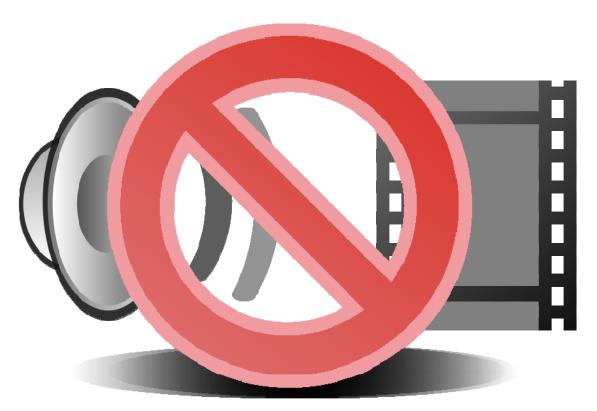

EmbeddedFiles entry in name dictionary

Rendered in/by PDF viewer

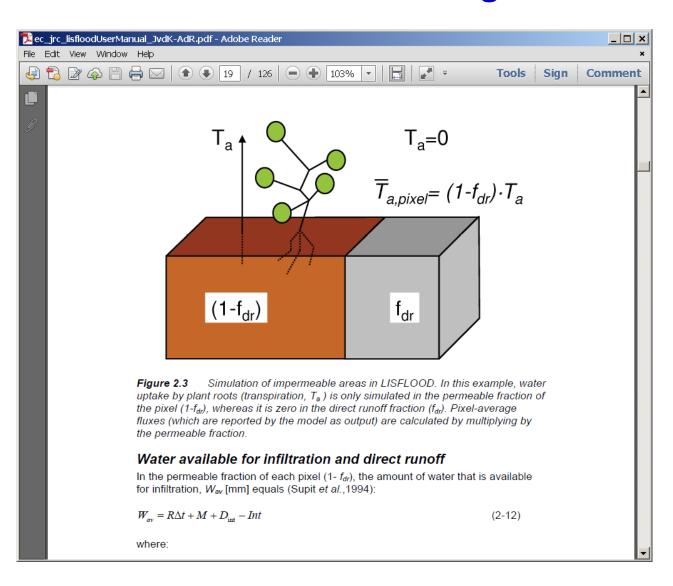

PDF/A-3

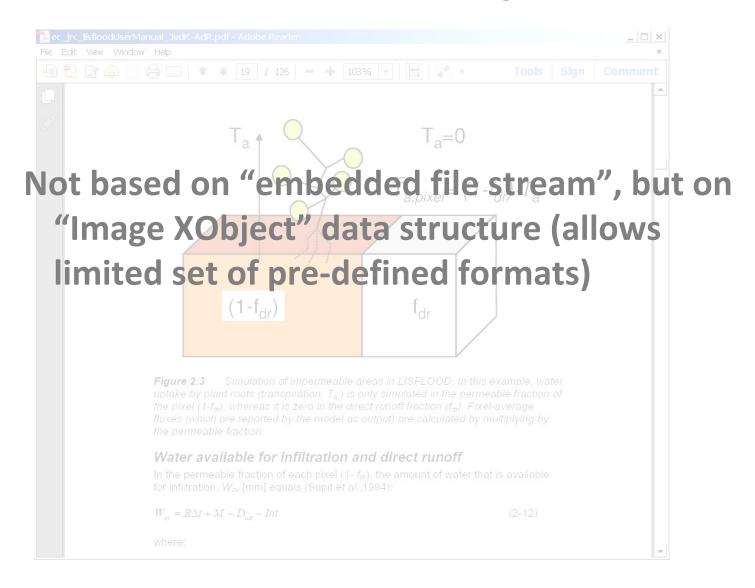

Rendition actions

Screen annotations

What about inline images?

What about inline images?

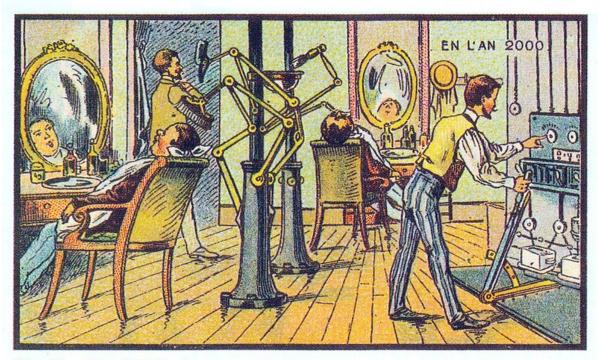

Embedded files wrap-up:

No impact on content that is meant to be rendered by PDF viewer

But PDF/A-3's may contain file of *any* possible format as an attachment

Part 2: JPEG 2000

The New-Fangled Barber

Supported since PDF/A-2

Ebook and Texts Archive > California Digital Library > Three men in a boat: (to say nothing of the dog)

Image XObject

```
1614 0 obj

<//Subtype/Image/Width 615/Height 978/ColorSpace/DeviceRGB

/BitsPerComponent 8/Interpolate true/Length 5278

/Filter/JPXDecode>>
stream
... Image data ...
::
endstream
endobj
```

Image XObject

```
1614 0 obj

<//Subtype/Image/Width 615/Height 978/ColorSpace/DeviceRGB

/BitsPerComponent 8/Interpolate true/Length 5278

/Filter/JPXDecode>>

stream

... Image data ...

::

endstream
endobj
```

Identifies object as JPEG 2000 image

ISO 19005-2 (PDF/A-2):

JPEG 2000 support based on subset of JPEG 2000 Part 2 (*JPX baseline*)

Only Part 1 of the standard (JP2) commonly used for archival applications!

The New-Fangled Barber

JP2 vs JPX

JP2

JPEG 2000 Part 1:

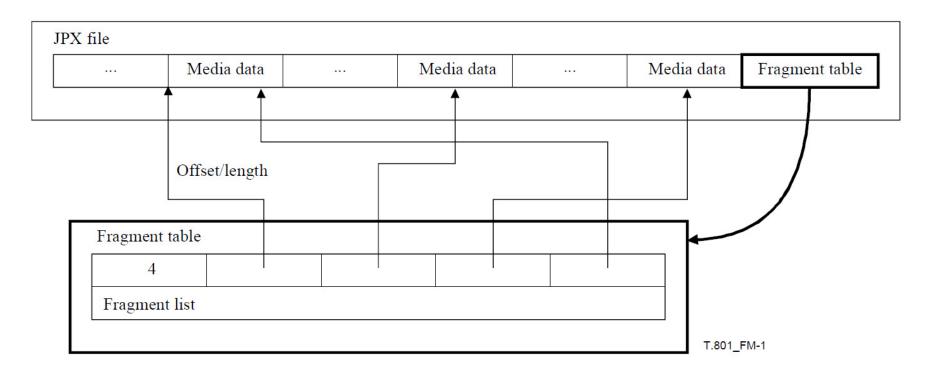

Basic still image format

JPX

JPEG 2000 Part 2:

= JP2 + assorted advanced stuff ...

Fragmented codestreams

Allowed in JPX Baseline!

OS PDF viewers – JPEG 2000 libraries

Ghostscript: OpenJPEG or JasPer

Evince: OpenJPEG

Mupdf: OpenJPEG

Firefox PDF viewer: built-in decoder

→ None of these libraries support fragmented codestreams!

Is it really a problem?

Fragmented codestreams extremely rare

But why is this feature even allowed in a longterm archival format?

OS support of JPEG 2000 in general remains problematic

Funding

This work was partially supported by the SCAPE Project. The SCAPE project is co-funded by the European Union under FP7 ICT-2009.4.1 (Grant Agreement number 270137).
