

In 2005 the DPC realised the need to help members to stay abreast with the large number of digital preservation projects being carried out by its members. For a while we therefore maintained a listing of member projects and selected a small number as a featured project to receive more detailed analysis. However as the number and scale of the projects increased, and the number of members also expanded so we have stopped maintaining this list. Instead **our Annual Report now contains a current summary** of members' projects, also reported in our regular What's New in Digital Preservation alert service. In January 2010 we create a new utility on the [Members' Projects Page](#) in which members could edit and add their own projects to the site.
